A Practical Business Process Management Solution

All companies agree that they need Business Process Management, however most CFO's and CIO's cringe when they think of the time and costs of implementing a BPM solution. Not to mention the ongoing costs of maintaining a solution.

Most BPM solutions are complex and operate only in the vendor specified environment. This adds costs to both implementation and maintenance. Complexity adds costs in implementation, training and ongoing definition of processes. Look at it this way, if the solution is presented by a large systems integrator then run. Why? Because they are recommending or selling a product that is sure to get them an extremely large integration contract!

At Information Processing Corporation we have developed a system that is easily implemented, maintained and it expands as your business and usage requires. **BPMOnline** is a flexible, dynamic business process management solution that will enable you to define standard business processes/practices that will be used throughout your organization. **BPMOnline** enables your staff and consultants to spend time on documenting and implementing "best practices" into your organization.

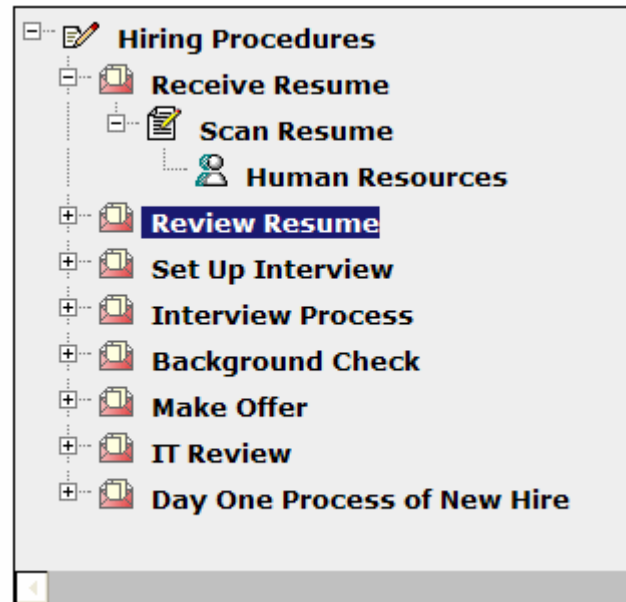

**BPMOnline** is a browser based solution enabling you to deploy it with multiple offices and business partners. Its notification facility promptly emails users when their attention is required, and it also provides daily reminders to help manage users.

Simplicity in its design makes business process templates easy to define and change. No programming is required! The same template can be used across departments, divisions and even customers or vendors. We use it with our customers for change management and service requests!

There is no need for six month implementations and hundred's of thousand dollars of consulting costs, **BPMOnline** can be learned within days and implemented within weeks. **BPMOnline** can be installed on your server(s), or use IPC as an ASP. IPC's ASP service provides you with your own instance of **BPMOnline** hosted on our servers in Dallas, accessible using your desktop via the Internet.

**BPMOnline** provides your management with the following features:

- Create Business Process templates from scratch, or copy an existing one
- Nightly emails to remind users they have tasks in BPM
- Move documents for review from one task to another
- Upload documents for others to review or edit
- Add comments on a task for others to review
- Report on completed or “in process” business flows
- Assign specific personnel to a task
- Business processes are archived, as well as documents and comments
- Know who signed off on a task, with date, time and the computer they used
- Use affiliates (vendors or customers) in your business processes. Increased collaboration with your partners
- Create your own access groups and users
- Management’s ability to view the status of a business process at any time
- Business Processes can be initiated by other systems using our **BPMOnline Web Service**
- Plus, reporting on tasks for Sarbanes-Oxley or HIPAA compliancy

Improve your business processes today. Call us for a demonstration.
