Mission

Provide quality products, software development and support services to our customers at a competitive cost. To always remember that our customers are the most important assets we have and to always provide them with honesty, integrity and value.

To follow the three P's that we believe are crucial in being successful for our customers and ourselves:

- **Pride**
We must pride ourselves in our work and the application of our work for our customers;
- **Persistence**
We must be persistent in our endeavors, whether it is development, sales or support. Never give up, find the answer. To quote Calvin Coolidge, "Persistence and determination alone are omnipotent.";
- **Performance**
Recognition that "tried" is not "good" enough. Recognize that we are measured on performance and that is the only acceptable outcome for any projects.

Who is IPC?

IPC listens to its customers' business issues and needs. Through our proprietary software (our "products"), software development services, and project management capabilities, combined with our commitment to customer support, IPC partners with you to create the solution to your business needs.

Information Processing Corporation (IPC) has been providing quality development, products and support to multiple industries since 1989. Our ability to continue operations during the many business and technology shifts in corporate America over this period proves our technical elasticity and competence. Our best salespersons are our customers. Why? Because we provide them excellent business solutions through technology and we are around to support them afterwards. The best way to get recommended is to do a great job.

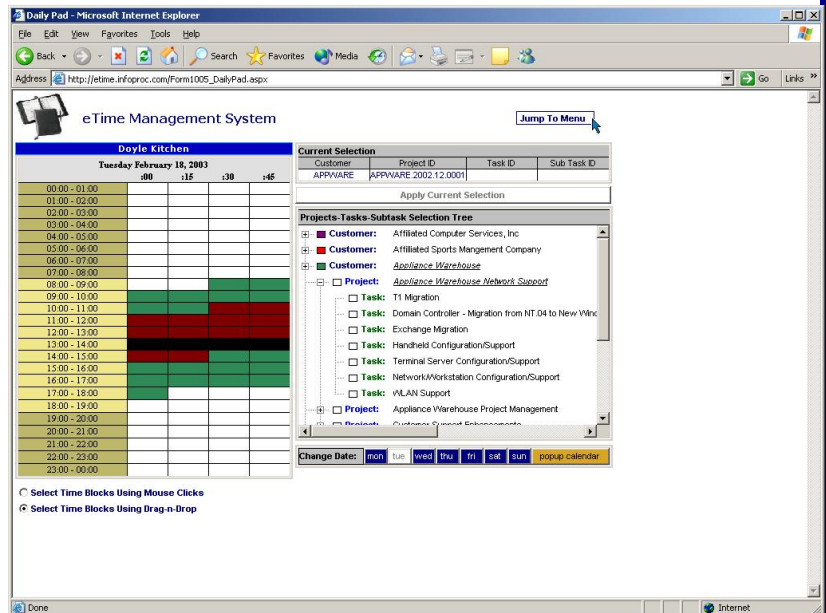

Over the past 14 years IPC has developed systems from the ground up for many customers in many industries. We pride ourselves in understanding our customers businesses and providing them with accurate and reliable solutions. Not just the solution de jour that many companies would steer their prospects to. We believe in developing and sound technical foundation that expedites business growth and the ability to change as business and opportunities dictate.

How can IPC help your Company?

Products:

IPC's products concentrate on providing business intelligence to its customers. Our DP-RAMS (resource accounting and management for outsourcer billing and for corporate chargeback) and eTime Management Systems provide a convergent solution for resource allocation and billing for IT and personnel resources.

These products combined with IPC's Contract management System provide a business intelligence solution that is unparalleled.

We also market and license our eBusiness Retail Management System (eRMS). This is a true "Click and Mortar" solution for almost any size retail establishment.

Professional Services

IPC has excelled in providing a total solution to our customers from business assessment to ongoing support. We have developed system on IBM mainframes, Tandem computers, Stratus computers, Unix based systems, Microsoft platforms and most currently Microsoft applications using the new Microsoft .net development environment.

IPC specializes in software development projects for companies that either do not have in-house expertise or do not have the resources at that time. We usually perform end-to-end development projects, business requirements to post-implementation support for our customers. In many cases post-implementation support leads us to long partnerships with our customers.

We also provide our customers with network support, IT consulting and other small projects that help them to meet their business demands.

Who are our Customers?

* - all image trademarks belong to their perspective companies.

and more.....

We have a diversified list of customers and industries. From Advertising to Outsourcing, IPC has developed and/or maintained software systems for over 14 years. We have the experience, we have the skins on the wall, and we know how to do it right!

We are not the average IT/Software Development/Support company. We consider ourselves a customer service company. We just happen to use technology to achieve our service. We provide our customers an experienced technology partner that can provide products, programming, support and consultation. We also pride ourselves in being the first on deck when our customers have problems. We know the urgency in solving production problems and we respond with all hands, even if it is not a problem with one of our systems.

Technology

IPC currently specializes in development of systems running Microsoft operating systems. Our primary development environment is the Microsoft .Net. We utilize ASP.Net and VB.Net in conjunction with Microsoft SQL Server as the database. We utilize this environment to further enable the data acquire by the system to be utilized by a multitude of Microsoft Office products and third party products. This increases the utilization of data and facilitates the creation of business information that helps manage your business.

From databases services to handheld applications IPC has developed intelligent enterprise business applications for our customers. Our goal is to always stay on the leading edge of technology and to find ways that new technology can be effectively implemented into our customer's business environment providing benefits to their business without creating unwanted operation challenges.

IPC's experience in technology encompasses more than just programming. We also implement networks for our customers from the wiring, up to monitoring solutions. We also provide Disaster Recovery consulting and services, including being the system backup site for customers. In one occasion we serve as a "hot backup" site that has been certified by our customer Appliance Warehouse to be operational within just a couple hours. That's Business Continuity!

What's next? IPC is constantly reviewing, testing and prototyping new technologies. We believe that we should test and experience it first, before we recommend and deploy a new technology into our customer's environment. Operational integrity just has higher marks to us than "Oh, that's way cool". This past year we have developed and implemented several programs using Wireless technology in the WLAN arena. In late 2003 we are taking that a step forward and implementing a system utilizing Nextel phones.

Where to go from here?

Give us a call! We look forward to working for you and you will find no better technology partner anywhere. Our customers will attest to that. Call us and we will give you a list. Please go to our website for more information about our products and services.
